# Mean gene-wide dN/dS estimates

- Are not the way to go, except when you have very small (2-3 sequence) datasets
- **For example:**
  - The humoral arm of the immune system mounts a potent defense against viral infections
  - Existing successful vaccines are based on raising a neutralizing antibody (nAb) response to the pathogen
  - No simple host genetic basis (epitopes) of the specificity of neutralizing antibody responses is known
  - Need to measure these responses
