

CAMP Modules: A Standardized Architecture for End-to-End Metagenomics Workflows

- *The CAMP ecosystem is a collection of modular analysis components that share a common internal structure while wrapping different algorithms for preprocessing, assembly, taxonomic classification, quality assessment, and functional profiling.*

A black and white photograph of a city skyline, likely Singapore, featuring a roller coaster in the foreground and a dense cluster of skyscrapers in the background. The text is overlaid on the image.

Why This Actually Matters to You

We don't need to sample people to protect people
