

The Urban & Peri-urban RNA Virus Atlas (UPVAtlas)

UPVAtlas maps 54,945 RNA viruses from 2,922 samples (collected 1H 2020) across 102 cities, revealing urban RNA viral diversity was previously unknown.

Computational Pipeline for RNA Virus Mining in Metatranscriptomes

Analysis reveals substantial novel urban RNA virus diversity, environment-structured richness, and cross-habitat connectivity.
