

UPVAtlas Highlights

UPVAtlas
Urban & Peri-urban RNA Virus Atlas

- **Deepest metatranscriptomic profiling of global cities to date.**
We examined ~3K samples (collected 1H2020), containing >100B reads to study RNA virus biology in urban environments, their hosts, and pathogenicity.
- **Our analysis uncovered two novel *Duplornaviricota* phyla** supporting the polyphyletic nature of this clade, with support from the published literature (Neri et al., 2022, Zayed et al., 2022).
- **Selection analyses of RdRp identified amino acid sites with directional selective pressures**, this may describe local adaption of viral groups.

CAMP: A Modular Workflow System for Scalable Metagenomics Analysis

- *CAMP provides a Snakemake-based, modular framework for building reproducible metagenomics workflows that can run individual analysis steps independently or connect them into larger multistep pipelines.*

The screenshot shows the NAR Genomics & Bioinformatics journal article page for the article "CAMP: a modular metagenomics analysis system for integrated multistep data exploration". The page features a dark blue header with the NAR logo and navigation links. The article title is prominently displayed in bold, followed by a list of authors and their affiliations. The article is categorized as a "JOURNAL ARTICLE" and is available in the "Volume 8, Issue 1" from "March 2026". The page also includes a table of contents with links to the Abstract, Introduction, and Methods sections. The article is published on 16 January 2026 and has a DOI of 10.1093/nargab/lqaf172.
